SUMMARY

AI engineer working on production language-model systems. Currently MSc Advanced Data Science & Artificial Intelligence at the University of Liverpool. Background spans full-stack engineering and applied ML — comfortable across the model–system boundary, from inference code and retrieval pipelines to evaluation harnesses and the front end that ships them.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript (ES6+), SQL, HTML, CSS

AI / ML: OpenAI, Anthropic / Claude, Gemini, LangChain, LangSmith, RAG pipelines, prompt engineering, structured outputs, MCP servers, Whisper STT, PyTorch (familiar)

Backend & Data: FastAPI, Node.js / Express, Postgres, pgvector, Redis, BullMQ, Supabase, vector search

Frontend: React 19, Next.js 15 / 16, Tailwind CSS, Vite, REST + GraphQL, accessibility basics

DevOps: Docker, Git, GitHub Actions, Vercel, GCP Cloud Run, AWS, Sentry, PostHog, Jest / Vitest, Playwright

EXPERIENCE

Full-Stack / AI Engineer Intern

Apr 2026 – Present

Meta Solution Technologies

Remote, UK

- Building an AI-guided admissions platform on Next.js 15 + React 19 + TypeScript. Chat-style guidance flow runs on OpenAI with structured outputs against a Postgres + pgvector knowledge store, served from a Python FastAPI service.
- Wrote auth end-to-end (Google OAuth, magic-link, PKCE) on Supabase, plus a BullMQ + Redis async queue driving document checks, generation jobs and email triggers.
- Shipped a 10-language i18n layer and a dual-theme CSS system so non-engineering teammates roll out copy and translation updates without involving me.

AI Engineer (Freelance)

May 2024 – Jan 2026

Self-Employed

Remote

- Designed and shipped LLM-powered applications for paying clients across SaaS, e-commerce and consulting — most pairing a React or Next.js front end with a Python service running Claude or OpenAI APIs, structured outputs and a RAG retrieval layer.
- Built longer-running AI agents for lead generation, customer support and data processing. Each project shipped with a README, a walkthrough video and a written hand-off doc.

Software Engineer Intern

Jan 2026 – Apr 2026

Recruit Pilot — Recruitment Technology

Remote

- Built React + TypeScript UI features against a REST API for a recruitment-tech product. Code review and weekly sprint cadence alongside more senior engineers.

Front-End Developer Intern

Mar 2025 – May 2025

Unified Mentor — EdTech

Remote

- Built React UI features on a learner-facing app serving thousands of users — components for lessons, progression and learner dashboards, integrated against a REST API.

SELECTED PROJECTS

Cogniloop — Socratic study tool. Locked-prompt evaluator that grades free-form student answers against a rubric, scores 0–3 with explanation, tracks concept mastery across sessions. Single-prompt design — no agent loop, no retrieval — keeps median latency under one second on Groq Llama 3.3 70B. Edge runtime, Next.js 16, KaTeX. · [Live](#) · [Code](#)

ScholarAI — Manifest V3 Chrome extension using Gemini's native PDF input to summarise research papers, extract citations and answer grounded questions about the open document, from a side panel. Bypasses scraping by treating the PDF buffer as the model's primary input. · [Live](#) · [Code](#)

MCP Marketplace — Registry of Model Context Protocol servers. Daily auto-sync from Glama and the official MCP repo, normalised tool schemas, one-line install snippets for Claude Desktop, Cursor and Claude Code. Next.js 15 RSC. · [Live](#) · [Code](#)

MedReviewAI — RAG pipeline over PubMed, bioRxiv and medRxiv that extracts a PICO frame per paper, scores extraction confidence per field, and surfaces conflicting findings across sources. · [Live](#) · [Code](#)

EDUCATION

University of Liverpool · MSc Advanced Data Science & Artificial Intelligence

Jan 2026 – Jan 2027

Christ University, Bengaluru · Bachelor of Computer Applications · CGPA 7.86 / 10

2022 – 2025
